BioSystems, 22 (1989) 343–345
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 22

actin-myosin system, cytoskeleton, graphs and graph representation, oscillations, biological, patterns and pattern analysis, sol-gel transition, 1
actins, capacity of making choices, cell motility, flagellum, measurement, 117
actomyosin ATP-ase, dissipative structures, quasi-stationary approximation, sol-gel transition, 127
adaptability, organizational systems, information systems, biological information processing, 223
adaptation, degradation, homeostasis, catastrophe, model, D1 protein, 241
adaptive behavior, metabolic control, time delays, metabolic stability, oscillations, 11
amino acid code partitioning, genetic code, genetic code degeneracy, information, 189
anaerobic chytridiomycetes, ultrastructure, phylogeny, 67
animals, cell nucleus, evolution, plants, Protoctista, taxonomy, 103
autopoiesis, physical domain, physical realization of autopoiesis, system logic of the living, 37

biocomputer, McCulloch-Pitt's equation, computer simulations, cyclic enzyme system, 155
biological, actin-myosin system, cytoskeleton, graphs and graph representation, oscillations, patterns and pattern analysis, sol-gel transition, 1
biological information processing, adaptability, organizational systems, information systems, 223
brain models, molecular computing, quantum computing, evolution, 197

capacity of making choices, actins, cell motility, flagellum, measurement, 117
catastrophe, degradation, homeostasis, adaptation, model, D1 protein, 241
cellular automata, learning machines, light-sensitive excitable media, double dynamics, pattern processing, 261
cell motility, actins, capacity of making choices, flagellum, measurement, 117
cell nucleus, evolution, plants, animals, Protoctista, taxonomy, 103
chaos, diffusive instability, dispersal, predator-prey interactions, discrete-time models, 279
characteristic curves of enzymes, oscillation, glycolysis, circuit analysis, thermodynamic network, 231
choice, indefiniteness, information, language, lexical process, 301
circuit analysis, oscillation, glycolysis, thermodynamic network, characteristic curves of enzymes, 231
codons, genetic code, origin, evolution, 177
community analysis, competition, direct and indirect relations, loop analysis, moving equilibrium, mutualism, positive feedback, 289
competition, community analysis, direct and indirect relations, loop analysis, moving equilibrium, mutualism, positive feedback, 289
computer simulations, biocomputer, McCulloch-Pitt's equation, cyclic enzyme system, 155
cyclic enzyme system, biocomputer, McCulloch-Pitt's equation, computer simulations, 155
cyclic nucleotides, molecular computer, quantum computer, 135
cytoskeleton, actin-myosin system, graphs and graph representation, oscillations, biological, patterns and pattern analysis, sol-gel transition, 1

D1 protein, degradation, homeostasis, adaptation, catastrophe, model, 241
degradation, homeostasis, adaptation, catastrophe, model, D1 protein, 241
delay compensation, neural network, phase conjugate, simulation, 215
diffusive instability, dispersal, predator-prey interactions, discrete-time models, chaos, 279
direct and indirect relations, community analysis, competition, loop analysis, moving equilibrium, mutualism, positive feedback, 289
discrete-time models, diffusive instability, dispersal, predator-prey interactions, chaos, 279
dispersal, diffusive instability, predator-prey interactions, discrete-time models, chaos, 279
dissipative structures, actomyosin ATP-ase, quasi-stationary approximation, sol-gel transition, 127
divalent metals, tyrosine kinase, insulin receptor, 55
double dynamics, learning machines, light-sensitive excitable media, pattern processing, cellular automata, 261

eIF-2α kinase, protein biosynthesis, eukaryotoic initiation factor eIF-2, eIF-2α phosphorylation, translational control, mammalian cells, 311
eIF-2α phosphorylation, protein biosynthesis, eukaryotoic initiation factor eIF-2, eIF-2α kinase, translational control, mammalian cells, 311

erythrocyte, metabolism, mathematical model, quasi-steady state approximation, 19
eukaryotoic initiation factor eIF-2, protein biosynthesis, eIF-2α phosphorylation, eIF-2α kinase, translational control, mammalian cells, 311
evolution, brain models, molecular computing, quantum computing, 197
evolution, cell nucleus, plants, animals, Protoctista, taxonomy, 103
evolution, genetic code, origin, codons, 177
evolution, parallel processing, optimization, hill-climbing, search strategies, population, genetic strategies, 163
evolution of seed dispersal by mammals, fleshy-seeded gymnosperms, multituberculates, seed-caching by mammals, 327

fermentation, oscillation, product inhibition, yield expression, 273
flagellum, actins, capacity of making choices, cell motility, measurement, 117
fleshy-seeded gymnosperms, evolution of seed dispersal by mammals, multituberculates, seed-caching by mammals, 327

genetic code, amino acid code partitioning, genetic code degeneracy, information, 189
genetic code, origin, evolution, codons, 177
genetic code degeneracy, amino acid code partitioning, genetic code, information, 189
genetic strategies, parallel processing, optimization, hill-climbing, search strategies, evolution, population, 163
glycolysis, oscillation, circuit analysis, thermodynamic network, characteristic curves of enzymes, 231
graphs and graph representation, actin-myosin system, cytoskeleton, oscillations, biological, patterns and pattern analysis, sol-gel transition, 1

hill-climbing, parallel processing, optimization, search strategies, evolution, population, genetic strategies, 163
homeostasis, degradation, adaptation, catastrophe, model, D1 protein, 241

indefiniteness, choice, information, language, lexical process, 301
information, amino acid code partitioning, genetic code, genetic code degeneracy, 189
information, choice, indefiniteness, language, lexical process, 301
information systems, adaptability, organizational systems, biological information processing, 223
insulin receptor, tyrosine kinase, divalent metals, 55

language, choice, indefiniteness, information, lexical process, 301
learning machines, light-sensitive excitable media, double dynamics, pattern processing, cellular automata, 261
lexical process, choice, indefiniteness, information, language, 301
light-sensitive excitable media, learning machines, double dynamics, pattern processing, cellular automata, 261
loop analysis, community analysis, competition, direct and indirect relations, moving equilibrium, mutualism, positive feedback, 289

mammalian cells, protein biosynthesis, eukaryotoic initiation factor eIF-2, eIF-2α phosphorylation, eIF-2α kinase, translational control, 311
mathematical model, metabolism, erythrocyte, quasi-steady state approximation, 19
mathematical model and kinetic parameters, oxygen dissociation curve, saturation function, 249
McCulloch-Pitt's equation, biocomputer, computer simulations, cyclic enzyme system, 155
measurement, actins, capacity of making choices, cell motility, flagellum, 117
metabolic control, time delays, metabolic stability, oscillations, adaptive behavior, 11
metabolic stability, metabolic control, time delays, oscillations, adaptive behavior, 11
metabolism, mathematical model, erythrocyte, quasi-steady state approximation, 19
metabolon, tricarboxylic acid cycle, supramolecular organization, protein-protein interactions, 91
model, degradation, homeostasis, adaptation, catastrophe, D1 protein, 241
molecular computer, cyclic nucleotides, quantum computer, 135
molecular computing, brain models, quantum computing, evolution, 197
moving equilibrium, community analysis, competition, direct and indirect relations, loop analysis, mutualism, positive feedback, 289
multituberculates, evolution of seed dispersal by mammals, fleshy-seeded gymnosperms, seed-caching by mammals, 327
mutualism, community analysis, competition, direct and indirect relations, loop analysis, moving equilibrium, positive feedback, 289

neural network, delay compensation, phase conjugate, simulation, 215

optimization, parallel processing, hill-climbing, search strategies, evolution, population, genetic strategies, 163
organizational systems, adaptability, information systems, biological information processing, 223
origin, genetic code, evolution, codons, 177
oscillation, product inhibition, fermentation, yield expression, 273
oscillations, actin-myosin system, cytoskeleton, graphs and graph representation, biological, patterns and pattern analysis, sol-gel transition, 1

oscillations, metabolic control, time delays, metabolic stability, adaptive behavior, 11
osclation, glycolysis, circuit analysis, thermodynamic network, characteristic curves of enzymes, 231
oxygen dissociation curve, saturation function, mathematical model and kinetic parameters, 249

parallel processing, optimization, hill-climbing, search strategies, evolution, population, genetic strategies, 163
patterns and pattern analysis, actin-myosin system, cytoskeleton, graphs and graph representation, oscillations, biological, sol-gel transition, 1
pattern processing, learning machines, light-sensitive excitable media, double dynamics, cellular automata, 261
phase conjugate, neural network, delay compensation, simulation, 215
photochemistry, porphyrins, proteinoids, prebiotic photosynthesis, 305
phylogeny, ultrastructure, anaerobic chytridiomycetes, 67
physical domain, autopoiesis, physical realization of autopoiesis, system logic of the living, 37
physical realization of autopoiesis, autopoiesis, physical domain, system logic of the living, 37
plants, cell nucleus, evolution, animals, Protoctista, taxonomy, 103
population, parallel processing, optimization, hill-climbing, search strategies, evolution, genetic strategies, 163
porphyrins, proteinoids, photochemistry, prebiotic photosynthesis, 305
positive feedback, community analysis, competition, direct and indirect relations, loop analysis, moving equilibrium, mutualism, 289
prebiotic photosynthesis, porphyrins, proteinoids, photochemistry, 305
predator-prey interactions, diffusive instability, dispersal, discrete-time models, chaos, 279
product inhibition, oscillation, fermentation, yield expression, 273
protein-protein interactions, tricarboxylic acid cycle, metabolon, supramolecular organization, 91
proteinoids, porphyrins, photochemistry, prebiotic photosynthesis, 305
protein biosynthesis, eukaryotoic initiation factor eIF-2, eIF-2α phosphorylation, eIF-2α kinase, translational control, mammalian cells, 311
protein structure, water structure, 51
Protoctista, cell nucleus, evolution, plants, animals, taxonomy, 103

quantum computer, cyclic nucleotides, molecular computer, 135
quantum computing, brain models, molecular computing, evolution, 197
quasi-stationary approximation, actomyosin ATP-ase, dissipative structures, sol-gel transition, 127
quasi-steady state approximation, metabolism, mathematical model, erythrocyte, 19

saturation function, oxygen dissociation curve, mathematical model and kinetic parameters, 249
search strategies, parallel processing, optimization, hill-climbing, evolution, population, genetic strategies, 163
seed-caching by mammals, evolution of seed dispersal by mammals, fleshy-seeded gymnosperms, multituberculates, 327
simulation, neural network, delay compensation, phase conjugate, 215
sol-gel transition, actin-myosin system, cytoskeleton, graphs and graph representation, oscillations, biological, patterns and pattern analysis, 1
sol-gel transition, actomyosin ATP-ase, dissipative structures, quasi-stationary approximation, 127
supramolecular organization, tricarboxylic acid cycle, metabolon, protein-protein interactions, 91
system logic of the living, autopoiesis, physical domain, physical realization of autopoiesis, 37

taxonomy, cell nucleus, evolution, plants, animals, Protoctista, 103
thermodynamic network, oscillation, glycolysis, circuit analysis, characteristic curves of enzymes, 231
time delays, metabolic control, metabolic stability, oscillations, adaptive behavior, 11
translational control, protein biosynthesis, eukaryotoic initiation factor eIF-2, eIF-2α phosphorylation, eIF-2α kinase, mammalian cells, 311
tricarboxylic acid cycle, metabolon, supramolecular organization, protein-protein interactions, 91
tyrosine kinase, insulin receptor, divalent metals, 55

ultrastructure, anaerobic chytridiomycetes, phylogeny, 67

water structure, protein structure, 51

yield expression, oscillation, product inhibition, fermentation, 273

BioSystems, 22 (1989) 347
